**A thesis submitted in the partial fulfillment of the requirements for the degree of  
Master of Science in Fisheries Resource Management**

**Department of Fisheries Resource Management**

**Faculty of Fisheries**

**Chattogram Veterinary and Animal Sciences University**

**Chattogram-4225, Bangladesh**

**AUGUST 2022**

## **AUTHORIZATION**

I hereby declare that I am the sole author of the thesis. I also authorize the Chattogram Veterinary and Animal Sciences University (CVASU) to lend this thesis to other institutions or individuals for the purpose of scholarly research. I further authorize the CVASU to reproduce the thesis by photocopying or by other means, in total or in part, at the request of other institutions or individuals for the purpose of scholarly research.

I, the undersigned, and author of this work, declare that the electronic copy of this thesis provided to the CVASU Library, is an accurate copy of the print thesis submitted, within the limits of the technology available.

## ACKNOWLEDGEMENTS

All gratitude is due to the Almighty **Allah Subhanahuwata'ala** for bestowing upon her the strength, ability and perseverance to pursue further education and complete her research work and thesis within due time, of course.

The author would like to express her profound love and sincere thanks to her parents, who brought her into the world and provided her with all she needed to succeed in life.

The author wants to express her heartfelt gratitude and indebtedness to Vice-Chancellor, **Professor Dr. Goutam Buddha Das**, and **Professor Dr. Mohammed Nurul Absar Khan**, Dean, Faculty of Fisheries, CVASU, from the bottom of her heart for their immense administrative support to complete her research work.

It is a pleasure to convey her profound gratitude to her MS supervisor, **Shahida Arfine Shimul**, Assistant Professor, Department of Fisheries Resource Management, CVASU, for her close supervision, immense support, and intellectual guidance during the author's whole research work.

The author also expresses her deepest sense of gratitude and sincere appreciation to her honorable teacher and research co-supervisor, **Dr. Sk. Ahmad Al Nahid**, Associate Professor and Head, Department of Fisheries Resource Management, CVASU, for his kind cooperation, authoritative guidance, insightful recommendations, and continuous motivation.

The author's appreciation and gratitude are extended to **UGC (University Grant Commission)**, Bangladesh and the **Ministry of Science and Technology** for funding required to accomplish her research work.

The author would like to convey her profound appreciation and warmest thanks to Mohammad Bokhteyar Hasan, Mrs. Supriya Biswas and all other laboratory technicians, Faculty of Fisheries, CVASU, for their sincere cooperation.

It's her fortune to gratefully acknowledge the support of Saifuddin Rana, Maitri Barua, and Jannatun Naeem for their support throughout the research tenure. Last but not least, the author also expresses her heartfelt gratitude and indebtedness to all the people who have supported her to complete the research work directly or indirectly.

## LIST OF ABBREVIATIONS

Acronym	Definition
MT	Metric ton
Km <sup>2</sup>	Kilometer square
Particles/m <sup>3</sup>	Particles per meter cube
Items/g	Items per gram
m	Meter
cm	Centimeter
cm <sup>2</sup>	Centimeter square
µm	Micro meter
ml	Milliliter
mm	Millimeter
M	Molar
g	Gram
L	Liter
g/cm <sup>3</sup>	Gram per cm <sup>3</sup>
m <sup>2</sup>	Meter square
df	Degrees of freedom
F	F-value
t	t- value
Sig.	Significance
Diff	Difference
SE	Standard error
e.g.	Exempli Gratia
ANOVA	Analysis of Variance

## ABSTRACT

Bangladesh is one of the countries that could be at risk from microplastic pollution. Only a few studies on microplastics have been conducted in Bangladesh. This is the first study on the identification and characterization of microplastics, the abundance of microplastics, and seasonal variation of microplastics in the surface water of the Karnaphuli river near Avaymitro Ghat, Chattogram. Sampling was conducted on a monthly basis from July 2021 to February 2022 by using a 200  $\mu\text{m}$  mesh size manta net. This study has shown that the abundance of microplastics was highest in the month of July ( $140370 \pm 19586$  particles per  $\text{km}^2$ ), when the average rainfall was highest, and lowest in the month of January ( $54815 \pm 9220$  particles per  $\text{km}^2$ ), when the average rainfall was lowest. The findings also reveal that the abundance of microplastics was 1.55 times higher during the rainy season ( $114639 \pm 8845$  particles per  $\text{km}^2$ ) than it was during the dry season ( $73796 \pm 6817$  particles per  $\text{km}^2$ ). Heavy rain and extensive riverine freshwater input in the rainy season transport greater terrestrial plastic trash into the riverine ecosystem, resulting in a higher average microplastics concentration in surface water. Characteristics of the microplastics (types, colors, shapes, size) were also quantified in this study. Six different types of microplastics were identified, of which fragments (39.30%) and filaments (33.40%) were the most dominant. Ten different colors of microplastics were observed, of which red (27.64%) and green (21.63%) colors were the most dominant. Six different shapes of microplastics were examined, with irregular (39.15%) and elongated (37.21%) shapes being the most dominant, and five different size classes of microplastics were found, with the 1mm to <2mm (32.97%) size class being the most dominant. Identification and quantification of microplastics gives an indication of the level of microplastic pollution in the study area, which will be very useful information for the concerned departments and stakeholders in order to start mitigating efforts.
