Registration No. 1119

Session: 2022-2023

**A thesis submitted in the partial fulfillment of the requirements for the degree of
Master of Science in Fisheries Resource Management**

Department of Fisheries Resource Management

Faculty of Fisheries

Chattogram Veterinary and Animal Sciences University

Chattogram-4225, Bangladesh

JUNE 2023

Authorization

I hereby declare that I am the sole author of the thesis. I also authorize the Chattogram Veterinary and Animal Sciences University (CVASU) to lend this thesis to other institutions or individuals for the purpose of scholarly research. I further authorize the CVASU to reproduce the thesis by photocopying or by other means, in total or in part, at the request of other institutions or individuals for the purpose of scholarly research.

I, the undersigned, and author of this work, declare that the electronic copy of this thesis provided to the CVASU Library, is an accurate copy of the print thesis submitted, within the limits of the technology available.

Acknowledgement

All praises are due to Almighty Allah for blessing me with the strength, aptitude and patience and enabled me to pursue higher education and to complete the thesis for the degree of Masters of Science (MS) in Fisheries Resource Management under the Department of Fisheries Resource Management, Chattogram Veterinary and Animal Sciences University, Chattogram, Bangladesh.

The author would like to express her deepest sense of gratitude, sincere appreciation, profound regards and indebtedness to her respected supervisor **Dr. Sk. Ahmad Al Nahid**, Head and Associate Professor, Department of Fisheries Resource Management, Faculty of Fisheries, Chattogram Veterinary and Animal Sciences University, for his unflinching co-operation, constant inspiration, affectionate feelings, warmth and indomitable guidance throughout the period of research work and preparation of the manuscript.

The author finds it a great pleasure in expressing her heartfelt gratitude and immense indebtedness to her research supervisor **Mrs. Shahida Arfine Shimul**, Assistant Professor, Department of Fisheries Resource Management, Faculty of Fisheries, Chattogram Veterinary and Animal Sciences University, for her sympathy, sincere cooperation, inspiration and valuable suggestions for the completion of the research work.

The author is extremely glad to take the opportunity to express her heartfelt thanks and gratitude to her all other respected teachers of the Faculty of Fisheries, Chattogram Veterinary and Animal Sciences University, for their valuable teaching and continuous encouragement during the study period in fisheries.

The author expresses her sincere thanks to **Mr. Saifuddin Rana** for his co-operation in data analysis and interpretation.

1.2 Significance of the study	2
1.2.1 Significance of microplastics	2
1.2.2 Significance of Patenga Sea Beach	2-3
1.3 Objectives of the study	3
Chapter Two : Review of Literature	4-13
2.1 Microplastic in marine environment	4-6
2.2 Microplastic in estuarine environment	7
2.3 Microplastic in freshwater environment	8-10
2.4 Microplastic pollution in Bangladesh	10-13
Chapter Three : Materials and Method	14-18
3.1 Study area	14
3.2 Sampling technique	14-15
3.3 Laboratory analysis	15
3.3.1 Wet sieving and drying	15
3.3.2 Wet peroxidation	16

3.3.3 Density separation	16
3.3.4 Filtration	17
3.3.5 Microplastics type, shape, color and size identification	17
3.3.6 Microplastics size measurement	17
3.4 Determination of microplastics abundance	17-18
3.5 Statistical analysis	18
Chapter Four: Results	19-24
4.1 Microplastics abundance	19-20
4.1.1 Variation of microplastics abundance among different sites	19
4.1.2 Seasonal Variation of microplasticss	20
4.2 Microplasticss characteristics	21-24
4.2.1 Microplastics type	21-22
4.2.2 Microplastics color	22-23
4.2.3 Microplastics shape	23-24
4.2.4 Microplastics size	24-25
Chapter Five : Discussion	26-30
5.1 Variation of microplastics abundance among different sites	26
5.2 Seasonal variation of microplasticss	26-27
5.3 Microplastics type	27-28
5.4 Microplastics color	28
5.5 Microplastics shape	28-29
5.6 Microplastics size	29-30
Chapter Six : Conclusion	31
Chapter Seven : Recommendation	32

Abstract

The extensive non-degradable waste produced by the diverse use of many synthetic polymers, particularly plastics, led to the formation of microplastics (MPs) in the aquatic ecosystems. This current study narrated about spatial and seasonal variation in MPs quantity and features in the surface water at Patenga Sea Beach in Chattogram. Sampling was conducted from January 2022 to December 2022 seasonally by using 200 μm mesh size manta net. This study shows that Patenga beach (8.53 items/m^3) has the highest abundance of microplastics and Bay terminal (1.83 items/m^3) had the lowest abundance. The findings also revealed that there was a considerable variation among the season regarding the microplastics abundance. The abundance of MPs peaked in the spring (9.64 items/m^3) and greatly differ from the winter (1.98 item/m^3) and summer (2.18 items/m^3) season. Characteristics of microplastics (types, colors, shapes, size) were also quantified in this study. There were six different types of microplastics identified of which fragment (49.63%) and filament (40.44%) were dominant. The eight different group of color were examined of which transparent (40.40%) and red (24.50%) were most dominant. Among six shapes of microplastics irregular (52.63%) and elongated (37.17%) and among five size classes 300 μm to 500 μm (48.50%) were the most dominant. Thus, the current study light up the current distribution and abundance of microlastics in Patenga Sea Beach and provide very useful information to the stakeholder and responsible agencies for starting the mitigation efforts.

Keywords: Microplastics, Surface water, Patenga Sea Beach, Abundance
